Summary					
Meeting Given By	Indigi Consulting & Solutions Private Limited				
Meeting Topics	Discussion on Dealer Management System Modules & Requirement Flow				
Date	09-06-2026	From	04:30 PM	To	06:00 PM
Location	Client Site, Panbazar	Duration	90 Minutes		

	Team Indigi	North East Infra Network
Participants	Manuj Gogoi	Champak Deka (Assistant Manager)
	Ridip Goswami	
Minutes were taken by	Manuj Gogoi	

Sl no	Activity/Points of discussion
A.	Project Modules Discussion
	<i>The following modules and system flow were discussed for the NE Infra Network's Dealer Management System:</i> • Dealer Profile Details: The dealer profile/details page should display the dealer's outstanding amount, along with separate credit and debit balances for better financial visibility. • Invoice and Order Management: A single invoice/order may include one or more products. Therefore, the system should support multiple product entries within a single invoice. • GST in Invoice: GST rate and GST amount should be included in the invoice calculation and display. • Product Master Details: GST and HSN/SAC code fields are required in the product master so that invoice generation can be handled properly as per taxation requirements. • Penalty Calculation: Penalty calculation should be introduced in the system. As discussed, the penalty will be calculated at 15% per year after 21 days.. • MIS Dashboard and Reports: An MIS dashboard is required to display charts, financial amounts, dealer-wise data, and performance-related reports. The dashboard should include filters such as Dealer, Branch Manager, Area Sales Manager, and ASO-wise views. The dashboard data should also allow click-to-view details for deeper analysis. • Official Hierarchy: The system should follow the below official hierarchy: Branch Manager (BM) → Area Sales Manager (ASM) → Assistant Section Officer (ASO) → Dealers <i>[The hierarchy should be considered while designing user roles, access control, dashboard filters, reporting, and dealer assignment]</i>
B.	BRD Approval
	• The client (NE Infra Network) will review, approve, sign, and share the finalized BRD document with us.
C	Design Approval
	• The client is satisfied with the proposed design system. They have confirmed that they will share the design approval email as soon as possible.

Conclusion:

All discussed modules and workflows were reviewed. Development planning and requirement analysis to proceed accordingly.
