

Dealer Management & Finance System

Easy Everyday User Guide (Non-Technical Manual)

Welcome! This guide is written in plain English to help you use the system for daily work. You don't need to know technical coding terms. Just follow the step-by-step arrow sequences and simple rules.

What is in this Guide?

- **Step 1: Logging In & Selecting Your Company (Getting Started)**
- **Step 2: Onboarding Your Dealers (Adding & Updating Profiles)**
- **Step 3: Managing Your Products & Selling Prices**
- **Step 4: Billing a Dealer (Creating & Finalizing Invoices)**
- **Step 5: Recording Payments & Automated Rewards or Penalties**
- **Step 6: Reading a Dealer Ledger (Account Statements)**

Step 1: Logging In & Selecting Your Company

If your account is assigned to work with multiple companies (like JSW and Eskay Marketing), you will choose which company context you want to log into.

Step-by-Step Action Table

Step	Action to Take	Expected Result
1	Open your browser and navigate to the system URL.	The Welcome Back! Login screen appears.
2	Enter your Phone Number & Password , then click Login .	* If you have 1 company mapping : you land directly on the Dashboard . * If you have multiple mappings : the Select Role & Company window pops up.
3	Choose the active Company and Role from the dropdown and click Continue .	Your session is set up and you land on the Home Dashboard .
4	<i>Optional</i> : Click Switch Context on the top navbar at any time.	The company/role dropdown opens to allow context switching.

Quick Flow:

Open Browser → Enter Phone & Password → Click Login → Choose Company Context (if asked) → Land on Dashboard

 Simple Explanations:

- **Active Context:** This means the company you are currently looking at. If you switch context to JSW, you will only see JSW dealers and invoices. If you switch to Eskay Marketing, you will only see Eskay's data.

Step 2: Onboarding Your Dealers (Adding & Updating Profiles)

Keep your dealer list up to date. You can add new dealers, edit their details, or block them if they stop trading.

Step-by-Step Action Table

Step	Action to Take	Expected Result
1	Click Dealers in the sidebar.	The dealers list page loads, displaying current accounts and outstanding balances.
2	Click the blue + Add Dealer button.	A slide-out panel or popup form opens.
3	Fill out the form fields (Name, Code, Phone, PAN, GST, Address).	The form is completed and validated.
4	Click Submit .	System checks for duplicate PAN/GST. If unique, saves the dealer and refreshes the list table.
5	Locate a dealer and click the Edit icon (Pencil).	Opens pre-populated form where you can update details or set status (Active, Inactive, Blocked).

Quick Flow:

Click Dealers → Click + Add Dealer → Fill Name, Code, Phone, PAN, GST → Click Submit → Dealer Appears in List

 Understanding the Fields:

- **Dealer Name:** The business name (e.g., *Sharma Hardware Store*).
- **Dealer Code:** A unique short code to identify them (e.g., *DL-SHARMA-01*).

- **GST & PAN:** Tax numbers. **Note:** The system checks these. If you try to add a GST or PAN that already exists for another dealer, the system will prevent it to avoid errors.
- **Dealers Table & Outstanding Balance:** The main table displays how much money each dealer currently owes you.

$$\\text{\\$\\$\\text{\\{What They Owe (Outstanding)\\}} = \\text{\\{Total Bills Shared\\}} - \\text{\\{Total Payments Received\\}} + \\text{\\{Starting Balance\\}}\\$\\$$$
- **Blocking a Dealer:** If you edit a dealer's status to **Blocked** or **Inactive**, the system will freeze their account so no new bills or orders can be made for them.

Step 3: Managing Your Products & Selling Prices

Set up the products you sell and how much they cost per ton (MT).

Step-by-Step Action Table

Task	Step	Action to Take	Expected Result
Setup Categories	1	Go to Inventory → Categories	Opens the categories configuration panel.
	2	Click + Add Category	Enter category name & code, and click Submit to save category.
Setup Products	3	Go to Inventory → Products	Opens the product catalog panel.
	4	Click + Add Product	Select Category, enter SKU/HSN, size, unit, and click Submit .
Setup Pricing	5	Go to Inventory → Product Pricing	Opens the pricing manager panel.
	6	Click + Configure Pricing	Select Product, enter price per Ton, GST%, set dates, and click Save .

Quick Flow:

- **Categories:** Click Categories → Click + Add Category → Enter Name/Code → Click Submit
- **Products:** Click Products → Click + Add Product → Enter SKU & Base Price → Click Submit
- **Pricing:** Click Product Pricing → Click + Configure Pricing → Select SKU & Rate → Save Rate

Simple Explanations:

- **Category:** Groups related products together (e.g., GP Sheets, Color Coated Sheets).
- **Product:** The actual material item (e.g., GP Sheet 0.50mm measured in Metric Tons).
- **Product Pricing:** Where you set the selling rate (Price per MT), the tax rate (18% GST), and the date range this price is valid for.

Step 4: Billing a Dealer (Creating & Finalizing Invoices)

When you make a sale, you generate a bill (invoice) for the dealer.

Step-by-Step Action Table

Step	Action to Take	Expected Result
1	Go to Accounts → Invoices and click Generate Invoice .	The invoice billing form opens.
2	Select the Buyer (Dealer), Ship-To address, and GST% .	Click Save Draft to initialize the invoice.
3	Choose product SKU and enter Quantity in Tons (MT) .	Click + Add Item to add the row to the invoice.
4	Add more items if needed, and review calculations.	Taxes (CGST/SGST) and totals calculate dynamically.
5	Click the Finalize Invoice button.	Invoice is locked, assigned a unique bill number, and posted to the dealer ledger.

Quick Flow:

Click Invoices → Click Generate Invoice → Select Buyer & GST% → Click Save Draft → Add SKU & Quantity → Click Finalize Invoice

Simple Explanations:

- **Buyer & Ship-To:** Buyer is the dealer who gets billed. Ship-To is where the metal sheets are delivered. These can be the same or different.
- **Quantity (MT):** Always entered in Metric Tons (e.g. 10.5 MT).
- **Dynamic Calculations:** The system automatically calculates:
 - *Taxable Value* = Weight (MT) $\times$ Price per MT.
 - *CGST / SGST* = The GST tax breakdown.
 - *Grand Total* = Taxable Value + Taxes. This is the total amount they must pay.

-  **Crucial Rule:** You must click **Finalize Invoice** to register the sale. Once finalized, the invoice is locked (you cannot edit or delete it) and it instantly adds to the dealer's outstanding dues.

Step 5: Recording Payments & Automated Helpers

When a dealer pays you, record the money receipt. The system handles the complex financial calculations automatically.

Step-by-Step Action Table

Step	Action to Take	Expected Result
1	Go to Accounts → Payment Tracks .	The billing tracker loads.
2	Find the finalized invoice and click Record Voucher .	The payment popup panel opens.
3	Select Receipt as Voucher Type.	Enables the standard receipt entry fields.
4	Enter Amount, Transaction Date, and Payment Mode (RTGS, Cash, Cheque)	Click Submit . Dynamic outstanding dues are reduced.
5	Early Payment Reward: Check if payment falls in discount slab.	System auto-posts a Credit Note ("By Discount & Scheme") to award discount.
6	Late Payment Penalty: Check if payment date is past due date.	System auto-posts a Debit Note ("To Interest on Delay Payment") to charge 15% p.a. penalty.

Quick Flow:

Click **Payment Tracks** → Click **Record Voucher** → Select **Receipt** & Enter Amount → Click **Submit** → System checks dates → Auto-generates **Credit Note (Discount)** OR **Debit Note (Penalty)**

Real-Life Examples of the Automated Helpers:

- **The Early Payment Discount (Credit Note):**
 - *Example:* If a dealer pays within 4 days, they get a cash discount (e.g. ₹700 off per ton).
 - *What the system does:* When you submit a receipt matching these dates, the system automatically writes a **Credit Note** under their ledger, giving them the discount and reducing what they owe without you having to compute it manually.
- **The Late Payment Interest Fee (Debit Note):**
 - *Example:* If a dealer pays late (after the invoice due date), they are charged a penalty rate of 15%\$ per year (calculated daily).

- *What the system does:* The system calculates the exact number of late days and posts a **Debit Note** (interest charge), adding this amount to what they owe.

Step 6: Reading a Dealer Ledger (Account Statements)

Think of a dealer statement like a bank passbook. It lists every transaction (debits and credits) between you and the dealer.

Step-by-Step Action Table

Step	Action to Take	Expected Result
1	Go to Accounts → Dealer Statement .	The account ledger filter screen appears.
2	Select the Dealer Name and the Financial Year or custom date range.	The query is set up.
3	Click Search / View Ledger .	The statement ledger loads with opening balance, transaction list, and closing balance.
4	Click Export to PDF or Export to Excel in top menu.	Downloads printable PDF statement or raw Excel spreadsheet.

Quick Flow:

Click Dealer Statement → Select Dealer Name & Dates → Click Search → Review Balances → Export to PDF / Excel

Reading the Ledger Transactions:

- **Opening Balance:** The initial amount they owed before this period started.
- **"To GST Sale 18%" (SALES):** A bill we sent them. This **increases** what they owe.
- **"RECEIPT" (Payments):** Money they paid us. This **decreases** what they owe.
- **"By Discount & Scheme" (CREDIT NOTE):** Early payment discounts or refunds. This **decreases** what they owe.
- **"To Interest on Delay Payment" (DEBIT NOTE):** Penalty interest charges. This **increases** what they owe.
- **Closing Balance:** The final, up-to-date amount they owe you at the end of the selected dates.
